Personal Statement

Senior Full-Stack Web Developer with extensive experience modernising legacy platforms and architecting scalable web applications. Proven track record of leading end-to-end migrations, transitioning monolithic architectures to containerised, TypeScript-driven environments. Adept at managing CI/CD pipelines, integrating complex third-party APIs, and delivering highly performant solutions across the full software development lifecycle.

Technical Expertise

Frontend: Angular; Typescript; SASS; React Native

Backend: Node; Fastify; Python; PHP

Database & Infrastructure: SQLAnywhere; MongoDB; Docker; GitHub Actions (CI/CD); REST APIs

Tools & Integrations: Stripe Payments; Google reCAPTCHA v3; Git

Professional Experience

IQX | Lilliesleaf, Scotland (Sep 23 - Current)

Senior Web Developer

Frontend Modernisation: Led full-stack migration of iqxWEB from AngularJS to modern Angular (v19+), enforcing end-to-end type safety, Standalone Components, Signals, and Zoneless change detection for peak runtime performance.

Backend Architecture: Architected WebHub—a high-concurrency Node replacement for single-threaded Delphi middleware—scaling the platform to process tens of thousands of peak timesheet approval requests without downtime.

DevOps & Infrastructure: Standardised environment workflows by containerising services with Docker and establishing automated GitHub Actions CI/CD pipelines utilising self-hosted runners.

Exterity | Dalgety Bay, Scotland (Jun 19 - Jun 21)

Graduate Software Engineer & Intern

IPTV Platform Engineering (AvediaStream): Contributed to the development of the core AvediaStream enterprise IPTV product suite across head-end, set-top box, and server infrastructure.

Solution Builder Project: Independently engineered key components of "Solution Builder," an automated tool generating client system specifications, compatibility reports, hardware requirements, and pricing structures.

Cloud R&D & Emerging Tech: Embedded with the R&D team to support early cloud architecture initiatives, building cross-platform applications and services using TypeScript, React Native, Python, and PHP.

The Hawick Paper | Freelance (Jun 20 - Dec 20)

Application Developer

Designed, deployed, and maintained a React Native mobile app (iOS & Android) for content distribution, implementing Python backend data controllers and managing App Store subscriptions.

Turnbull & Scott | Hawick, Scotland (Jun 18 - Aug 18)

WordPress Web Tools Developer

Engineered custom WordPress web tooling utilising PHP, JavaScript, HTML5, and CSS3 within strict project timelines.

Education

Heriot-Watt University | MEng Software Engineering (Sep 16 - Jun 21)

1st Class Award

Certificate of Merit (Years 1 & 2) ¹; Deputy Principal's Award ²

<https://matthewfrankland.co.uk/docs/transcript.pdf>

Personal Projects

Embedded Hardware & IoT Automation

Designed custom ESP32 microcontroller hardware interfaces using ESPHome, optocouplers, relays, and ES8388 audio codecs for local Home Assistant integrations, and home network orchestration.

Apple Ecosystem Engineering

Built and tested native watchOS applications for Apple Watch using Xcode, Swift, and core watchOS SDKs, managing target build pipelines and device provisioning.

Web Architecture & Data Pipelines

Architected full-stack platforms including [Revive Scotland](#) (featuring a Node.js/Fastify backend with event orchestration and Stripe based donations), [Personal Website](#) and forked npm packages including [@iqx-limited/ngx-toastr](#), [@iqx-limited/quickpdf](#), and [@iqx-limited/sqlanywhere](#).

Payment & Security Systems

Implemented secure, production-ready web endpoints protected by Google reCAPTCHA v3 and integrated Stripe Payment Links for automated transaction and donation workflows.
